

## Math 267 Quiz 8 – Fall 2021

**Instructions:** You must show all of your work, including all steps needed to solve each problem, and explain your reasoning in order to earn full credit.

1. Solve the following system of linear differential equations by using eigenvalues and eigenvectors.

$$\frac{dy}{dt} = -7y - 5v$$

$$\frac{dv}{dt} = 10y + 8v$$

$$A = \begin{pmatrix} -7 & -5 \\ 10 & 8 \end{pmatrix}$$

$$0 = \det(A - \lambda I_2) = \begin{vmatrix} -7-\lambda & -5 \\ 10 & 8-\lambda \end{vmatrix}$$

$$= (-7-\lambda)(8-\lambda) + 50$$

$$= \lambda^2 - \lambda - 6 = (\lambda - 3)(\lambda + 2)$$

$$\Rightarrow \lambda = 3, -2$$

$$\lambda = 3: \begin{pmatrix} -10 & -5 \\ 10 & 5 \end{pmatrix} \xrightarrow{R_1+R_2 \rightarrow R_2} \begin{pmatrix} -10 & -5 \\ 0 & 0 \end{pmatrix}$$

$$\xrightarrow{-\frac{1}{10} R_1 \rightarrow R_1} \begin{pmatrix} 1 & \frac{1}{2} \\ 0 & 0 \end{pmatrix} \Rightarrow v_1 + \frac{1}{2} v_2 = 0$$

$$\Rightarrow v_1 = -\frac{1}{2} v_2 \quad \Rightarrow \begin{pmatrix} -1/2 \\ 1 \end{pmatrix} \text{ an eigenvector}$$

Instructions: You must show all of your work, including all steps needed to solve each problem, and explain your reasoning in order to earn full credit.

$$\lambda = -2 : \begin{pmatrix} -5 & -5 \\ 10 & 10 \end{pmatrix} \xrightarrow{R_2 + 2R_1 \rightarrow R_2} \begin{pmatrix} -5 & -5 \\ 0 & 0 \end{pmatrix}$$

$$\xrightarrow{-\frac{1}{5} R_1 \rightarrow R_1} \begin{pmatrix} 1 & 1 \\ 0 & 0 \end{pmatrix} \Rightarrow v_1 + v_2 = 0$$

$$\Rightarrow v_1 = -v_2 \quad \Rightarrow \begin{pmatrix} -1 \\ 1 \end{pmatrix} \text{ an eigenvector}$$

$$\begin{pmatrix} y \\ v \end{pmatrix} = c_1 e^{3t} \begin{pmatrix} -1/2 \\ 1 \end{pmatrix} + c_2 e^{-2t} \begin{pmatrix} -1 \\ 1 \end{pmatrix}$$

$$= \begin{pmatrix} -\frac{1}{2} c_1 e^{3t} - c_2 e^{-2t} \\ c_1 e^{3t} + c_2 e^{-2t} \end{pmatrix}$$
